

FPL Decision Companion

A mobile-first Fantasy Premier League toolkit for UK, European, and North American managers — plan transfers, read the gameweek, and track deals in one product.

Working codebase title: FPL Squad Viewer · Commercial brand: see Brand Naming Options
Production: <https://fpl-squad-viewer.fly.dev> · Stack: React SPA + Hono BFF + Postgres cache

Executive summary

We are building a **subscription freemium** companion to the official Fantasy Premier League game. Users link a public FPL team ID (or sign in to sync drafts and watchlists). The product focuses on **weekly decision quality** — not replacing FPL, not betting, not daily fantasy.

Problem

Serious managers juggle 4–6 websites before each deadline: live rank, fixtures, price changes, predictions, and transfer notes.

Solution

One fast mobile web app with planning, review, predictions, and league intelligence — priced below the mid-tier incumbents.

Market

- **TAM:** ~11M FPL managers worldwide (Premier League official game, 2025/26 season).
- **SAM:** ~1–2M “active optimisers” who use third-party tools weekly (Scout, Fix, fpl.team, FPL Review cohort).
- **SOM (Year 1 target):** 5,000 paying Premium users × £25 season ≈ **£125k gross** before payment fees; stretch 15k × blended ARPU £30.

Geography: primary UK; secondary Western Europe and US/Canada English-speaking FPL communities. Single English product, GBP-led pricing with multi-currency checkout.

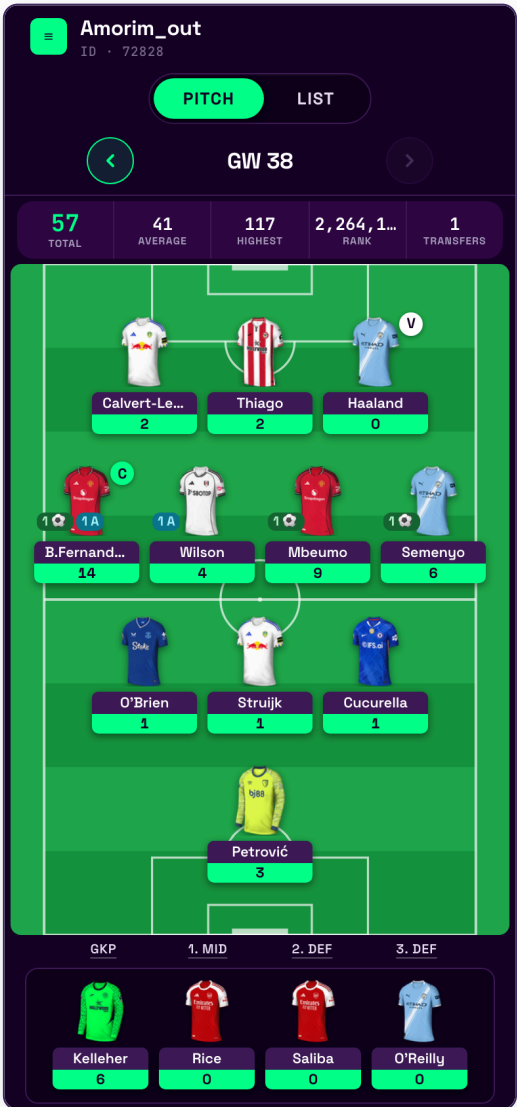

Business model

Tier	Season (one-time)	Annual	Monthly
Free	£0	£0	£0
Premium	£25	£29/year	£3.99/mo
Pro (2026 H2)	£45	£48/year	£5.99/mo

Premium launch aligns with **fpl.team Wonderkid (~£25/yr)** and **FPL Focal (~£30/yr)**. Pro tier deferred until live rank + transfer solver + proprietary xPts model ship.

The product experience

Screenshots from the running application (local dev, team ID 72828). This is what managers see each gameweek — one app instead of a tab stack.

Home base. Pitch-first squad with chips, player context, and gameweek navigation — faster to scan than the official app.

Spot trends. DEFCON and BPS leaderboards for differential hunting.

Track rivals. Follow managers — points, rank movement, recent transfers.

Shortlist targets. Track players before committing a transfer.

Capabilities shipped

Area	Capability	Status
Squad	Pitch + list views, GW navigation, chips, player cards (FDR, ownership, form badges)	Live
Planning	Transfer planner, budget validation, cloud draft sync when signed in	Live
Review	Gameweek review — performers, transfers, what-if	Live
Fixtures	Season calendar — FDR, DGW/BGW, recovery / rotation view	Live
Market	Price changes (actual + tonight predictions); predicted points (freemium)	Live

Area	Capability	Status
Social	Manager + player watchlists; league participant browser	Live
Stats	My stats, leagues, top players, DEFCON/BPS leaderboard	Live
Accounts	Email + Google auth; premium upsell flows (paywall UI ready)	Live

Product roadmap (monetised)

Initiative	Investor value	ETA
Premium checkout (MON-01)	Revenue switch	Q3 2026
Predicted lineups (20 clubs)	Parity with fpl.team	Q3 2026
Live rank + mini-league live	Matchday retention	Q3–Q4 2026
Statistical xPts model (PRED-09)	Differentiated predictions + confidence	Q4 2026
Transfer solver	Pro tier anchor vs FPL Review	Q4 2026
Chip advisors (WC/FH/TC/BB)	High-intent premium moments	Q4 2026 – Q1 2027
AI analyst chat	ARPU expansion	2027

Technology moat (pragmatic)

- **BFF + Postgres cache** — trims official FPL API payloads; frozen GW rows; rate-limited prefetch (ADR 0018).
- **Spec-first delivery** — OpenSpec capabilities reduce rework; faster iteration than content-heavy incumbents.
- **Free-data ML path** — PRED-09 avoids Opta licence cost at launch; upgrade path when revenue supports data deals.
- **Mobile UX** — native-feel pitch UI; guided transfer tour; lower cognitive load than desktop-first Scout.

Go-to-market

1. **Community** — r/FantasyPL, FPL Twitter/X, Discord servers; compare threads vs fpl.team / Plan FPL.
2. **Content SEO** — “price change tonight”, “FDR calendar”, “gameweek review” landing pages.
3. **Free tier virality** — guest squad view via team ID link; league browser for rival scouting.
4. **Seasonal campaigns** — GW1 draft assistant; DGW chip push notifications (when live).

Use of funds (illustrative)

Category	%	Notes
Engineering	55%	MON-01, live rank, PRED-09, solver
Infrastructure	15%	Fly → Cloudflare migration, Supabase, Redis at scale
Data / ML	15%	Model validation, optional Opta later
Growth	10%	Paid tests, creator partnerships
Legal / ops	5%	Stripe, privacy, terms

Team & stage

Product is **pre-scale revenue**: core screens shipped; payment integration and brand launch are the next gates. Spec-driven monorepo (web + proxy) with unit tests and Storybook on critical UI.
